## Simple Guide of Waste Segregation at Home from Flash Services

Sustainable waste management towards a CLEANER, GREENER TOMORROW!  
[www.flashservices.co.ke](http://www.flashservices.co.ke)

Waste segregation at home is an important step in reducing environmental impact and facilitating recycling and proper waste disposal. It involves separating waste into different categories based on its type. Two common categories for waste segregation are wet waste (organic waste) and dry waste (non-organic waste). Here's a simple guide on how to segregate waste at home:

**1**

### **Set up separate bins or containers**

Obtain two separate bins or trash bags for collecting wet and dry waste. These could be different-coloured trash bags or labelled bins to make segregation easier.

**2**

### **Understand the difference**

» **Wet Waste (Organic Waste):** This includes biodegradable waste that can decompose naturally. Common examples are food scraps, fruit and vegetable peels, tea leaves, coffee grounds, and garden waste.

» **Dry Waste (Non-organic Waste):** This category includes non-biodegradable waste that doesn't decompose easily. Examples are plastics, paper, cardboard, glass, metals, and electronic waste.

**3**

### **Separate waste at the source**

When disposing of waste, make it a habit to separate it at the source. For instance, when preparing food, separate food scraps from packaging materials.

**4****Properly dispose of wet waste**

- » Collect wet waste in one of your designated bins or trash bags.
- » Store it in a cool, dry place or use a composting bin if you plan to compost at home.
- » If your area has a composting program, consider contributing to community composting efforts.

**5****Properly dispose of dry waste**

- » Place dry waste in the other designated bin or trash bags.
- » Flatten or break down cardboard boxes to save space and make recycling easier.

**6****Educate your family**

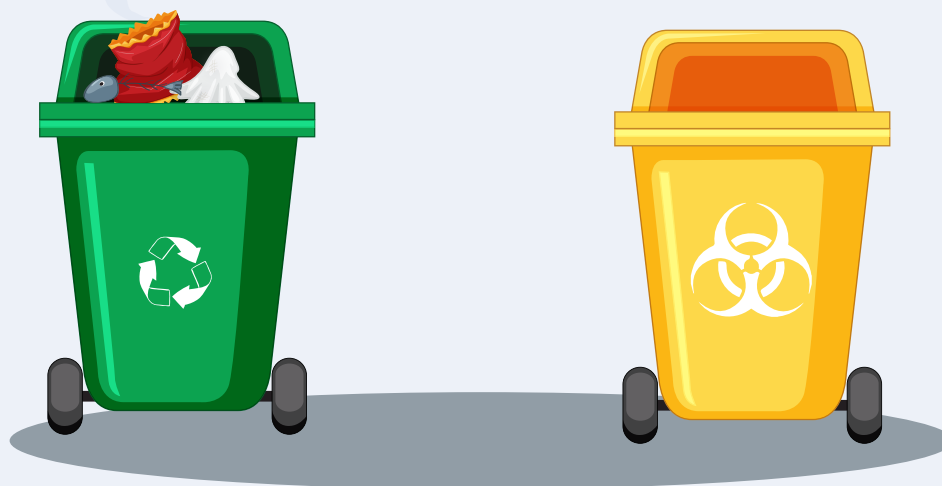

Ensure that everyone in your household is aware of and follows the waste segregation process.

**7****Regularly empty and clean bins**

- » Empty the wet and dry waste bins regularly to prevent odor and pests.
- » Clean the bins periodically to maintain hygiene.

**8****Dispose of hazardous waste separately**

Items like batteries, fluorescent bulbs, and electronic waste should not be mixed with wet or dry waste. Check local guidelines for the proper disposal of hazardous waste.

9

### Follow local guidelines

Be aware of your local waste disposal and recycling guidelines, as they may vary from one area to another.

10

### Encourage neighbours and friends

Spread awareness about waste segregation and encourage others to adopt responsible waste management practices.

By following these steps, you can contribute to a cleaner environment and more efficient waste management while reducing the amount of waste sent to landfills. Remember that waste segregation is a small yet impactful step toward a more sustainable future. Contact us for Garbage Collection Services 0206551533.
